

Welcome to Time and Invoicing from JustCRMs !

CE Module - This is provided free under the terms of the GPLv3 licence. This means without warranty or support of any kind. Please test the module in a development site prior to using in production.

The CE Module is suitable for all flavours of sugar (Community Edition, Professional etc) but currently requires MySQL. Please contact us if you would like to help fund MSSQL compatibility (which requires specific changes to handle time aggregation for timesheets).

We are currently designing Phase 2 - please have a look at the Phase 2 forum and leave any comments you have.

Also - if you have time - why not leave a review (and please be nice!)?

Lastly, we depend on your support to provide future releases. If you use our module please make a donation using SugarExchange or better still, purchase email support for piece of mind.
